CLASSIFICATION SERVICES

We are experts in the classification and reclassification of patents.

The classifications assigned to your patent applications determine which Art Unit at USPTO will examine your application and which prior art Examiners will use to evaluate whether your patent is novel, non-obvious, and patentable. We understand classification at a claim level and how claim language is used to determine the most comprehensive claim which drives Art Unit and Technology Center assignments. We can help you evaluate the Art Unit likely to be assigned the case, how your claims align with patents in that class and subclass, and the pool of prior art your patent is most likely to be evaluated against.

Our team has hands on experience with the USPC, the IPC, ECLA Classes, and classifications rules. Each of our analysts have extensive experience classifying applications under the Pre-Grant Publications Program and PTO and have worked with PTO on a wide range of classification policy and operational engagements.

Our analysts understand technological convergence - when science, technology, and innovations blend to create new inventions and new science and technology and the trade-offs made when determining the examiner or team of examiners that will be assigned to review your patent application.

Using our custom Coronado IP concept search platform, we can help you find and evaluate the inventions that are closest to yours. We can find the classes that these patents are in and quickly find any outlier patents where the inventions in those patents are closest to yours. In addition to our custom Classification Services, we provide a range of complementary support including prior art search and review, Freedom to Operate analysis, and patent landscape review, and development of custom indexes.

Coronado Group offers secure, and confidential assessments at very competitive costs. Please call us today for a confidential quote.
